

ROMABIO

Changing The Way The World Makes Paint

Beautify Masonry Surfaces Naturally

- Extremely Durable
- Natural Beauty & Finish
- Breathable & Mold-Resistant

Natural Products For Natural Surfaces

ROMABIO Mineral & Lime Paints are BIO (biological), made from nature. They are not acrylic or latex paints. They are derived from sustainable materials and create a natural, breathable paint.

These paint products do NOT seal the brick, stone, or other surfaces, but rather the natural ingredients calcify to the surface. This creates a long lasting paint that is extremely durable, and won't peel or flake off.

Perfect Finish for Stone, Brick, Concrete & More

These high-performing products are perfect for any masonry surface and can create a flat, solid, or chalky finish:

BIODOMUS® I Interior & Exterior Mineral Paint that creates an extremely flat finish

BIODOMUS II Interior & Exterior Mineral Paint with additional aggregate that creates a textured, flat finish

BIOCALCE® A Interior & Exterior slow-set Lime Paint that creates a flat, chalky, and highly durable finish

"When we painted a 27 unit multi-family brick building, I did a side-by-side comparison of the BioDomus product and one of your competitors and found that it had much better coverage. The BioDomus product adhered to the surface better too, and wouldn't scratch or chip off. We are really pleased with it and with only two coats needed, it has better value and performance."

- Randy Parks, Special Projects Coordinator for Wesley Apartment Homes and Euramex Management Group

High-Performing, Beautiful & Easy To Use

Extremely Durable & Prevents Structural Damage

ROMABIO Mineral & Lime Paints have microcrystalline bonds that form to create a more durable coating. Durable coatings mean less frequent applications, saving material and labor costs. Mineral & Lime Paints also have a unique advantage because the permeability for water vapor is equivalent to that of the surface. This means water moisture contained in the parts of a structure or surface can diffuse outward without resistance, keeping walls dry and preventing structural damage.

Resists Damage From The Sun

ROMABIO Mineral & Lime Paints have an extremely high UV resistance, extending the performance of the product. The chemical fusion with the substrate and the UV stability of the binder are the fundamental reasons for the extraordinarily high lifetime of silicate paints.

Superior Coverage & Easy To Use

Due to the mineral content, these products have superior coverage, covering 20 - 25% more. No additional primer is needed for masonry surfaces, and it should be dampened prior to application. Thus, saving you time for your paint project to start if it rains or is a wet environment.

Beautiful & Luminous Color Options

ROMABIO Mineral & Lime Paints have dynamic color refraction due to the mineral content. Color palettes are more vibrant providing more depth and light, and they look more natural when painted on masonry surfaces. Color possibilities are unlimited as we can match other color palettes or choose from the ROMABIO color deck.

Breathable & Naturally Mold-Resistant

ROMABIO Mineral & Lime Paints are made from natural ingredients that when dry, form a honeycomb structure that contributes to a breathable wall system. A breathable wall means moisture and air move through a closed wall envelope, and reduce the buildup of stagnant moisture that contributes to mold growth and toxic air. Acrylic coatings are not breathable and trap moisture which leads to mold and bacterial growth, and to prevent it, toxic biocide ingredients have to be added.

Good For You & The Environment

Free of added APEO, PEG, PEO, formaldehyde, and do not contain solvents, phthalates, styrene, amines, free monomers, endocrine disruptors and biocides, as well as other toxic chemicals found in traditional acrylic paint. True Zero VOC (0.00) products, and with 3rd party reports verifying our marketing claims, you can trust our paint is safe for you, your family, and the environment.
