

# MASONRY FLAT & MASONRY TEXTURED

## HOW TO APPLY

### 5. Prep your surface.

**IMPORTANT: YOU SHOULD DAMPEN THE MASONRY SURFACE FOR BEST RESULTS.**

Pressure wash and thoroughly clean all surfaces prior to application. Mild soaps are acceptable, but usually not necessary. If they are used, make sure all residue is gone before painting. Protect surfaces that will not be painted.

For absorbent, unpainted masonry surfaces, dampen the wall or leave it damp from the initial cleaning. You don't need to have running water on it, but it should not be dry, anything in the middle is fine. This is especially important when temps are high.

#### Helpful Tip

Prep and paint on the first day allowing you to save time and manage your project better.

### 6. Start painting.

Apply in 50-90°F. Do not apply if the temperature drops below freezing in the first 36-48 hours after application. Apply like other traditional paint products.

Do not try to achieve perfect coverage with the first coat. Apply the first coat and allow the paint to dry 4-8 hours before applying the second coat. Touch up at any time because of the flat finish.

Two coats are a condition of the 20-year limited warranty for Masonry Flat and Masonry Textured.

**IMPORTANT: DO NOT LET MASONRY FLAT OR TEXTURED SET ON MASONRY SURFACES THAT ARE NOT TO BE PAINTED.**

If they do get on them, remove immediately. You can use a mild acid like vinegar or muriatic acid for harder cleaning if necessary.

#### Helpful Tip

Rain will not affect the paint application after 4-8 hours of drying time.

### 7. Clean up and you're done!

Clean-up with water and soap if necessary.

Romabio Paints are organic, and they will not harm lawns, plants or trees.

Masonry Flat & Masonry Textured are washable, but they should be allowed to cure for 14 days before cleaning. Light pressure washing may work as well, but not all stains can be removed because the paint creates a permeable surface.

If you pour the paint into a separate bucket and store the undiluted paint, you can store it for many years as the undiluted product has an excellent shelf life.

If you pour the water directly into the paint bucket and store the diluted paint, then this will reduce the shelf life and depending on storage it may only last a short period.

If you paint directly out of the container, this may cause contamination, so we do not recommend storing it for future use.
